CERTIFIED FULL STACK JAVASCRIPT DEVELOPER

PROFESSIONAL SUMMARY

Second-year B.Tech student and Certified Full Stack JavaScript Developer who ships end-to-end products: React and Next.js frontends, Python/Flask and Node.js backends, and LLM pipelines built on OpenAI APIs, RAG, and AI agents. Frontend engineering intern at an AI startup, Zulip open-source contributor, and builder of automation systems with n8n and Apify. Seeking Software Engineering, AI Engineering, Full Stack, or Founding Engineer internships.

EDUCATION

Ajeenkya D Y Patil University — B.Tech in Computer Science and Engineering (Second Year), Pune, India
CGPA: [8.11/10] | Coursework: Data Structures, DBMS, Web Application Development, Computational Thinking
Indian Institute of Technology Madras — BS in Data Science and Applications (Online)

EXPERIENCE

Frontend Engineering Intern — FlyRank AI

May 2026 – Aug 2026

- Built a reusable React and TypeScript component library of 25+ UI primitives adopted across 6 product modules, cutting new-feature build time by an estimated 30%; shipped features with 4 engineers via Agile sprints, code review, and CI/CD.
- Integrated 15+ REST API endpoints with typed clients, retry logic, and centralized error handling, reducing API-related bug reports by an estimated 40%.
- Optimized asynchronous data fetching using request caching, debouncing, and parallel loading, reducing average page load time from ~3.2s to ~1.8s (44% faster).
- Restructured the frontend into a feature-based architecture with code splitting and lazy loading, shrinking initial bundle size by ~25% and raising the Lighthouse performance score from 68 to 92.

PROJECTS

AI Product Intelligence Platform — Python, OpenAI, Vector Database, Flask, React

- Engineered an LLM pipeline that converts unstructured product data from websites, PDFs, and catalogs into structured, commerce-ready JSON, cutting manual cataloging effort ~80% and automating scraping-to-validation handoffs with n8n and Apify.
- Built document parsing and image understanding modules that process 500+ product pages per run at ~95% field-extraction accuracy using schema-constrained prompt engineering.
- Implemented Retrieval-Augmented Generation over a vector database indexing 10,000+ chunks, returning product enrichment context in under 1 second per query.

Workday Hub — Knowledge Management Platform — React, Supabase, PostgreSQL, JavaScript

- Developed a full-stack platform with Supabase authentication and role-based access control, supporting full CRUD across notes, resources, and dashboard modules behind a responsive React frontend.
- Designed a normalized PostgreSQL schema with row-level security policies, isolating user data across all tables and preventing cross-account reads by default.

Jal Drishti — AI-Powered Water Monitoring System — React, Flask, Leaflet, Python

- Built an interactive Leaflet dashboard backed by Flask REST APIs that clean and aggregate sensor data, rendering 1,000+ water quality readings without UI lag via marker clustering and replacing manual spreadsheet review with a live map view.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C++, HTML, CSS

Frameworks: React, Next.js, Node.js, Express, Flask, React Native

AI and Data: OpenAI APIs, LLM Applications, Prompt Engineering, AI Agents, Retrieval-Augmented Generation, PostgreSQL, Supabase, Vector Databases

Tools and Automation: Git, GitHub, Docker, CI/CD, Vercel, Render, Linux, macOS, n8n, Apify, Web Scraping

Concepts: REST APIs, API Integration, Authentication, System Design, Responsive Design, Agile, Problem Solving

OPEN SOURCE & LEADERSHIP

Open Source Contributor — Zulip (Python, Django, Docker)

2025 – Present

- Ran the Zulip server locally in Docker to reproduce issues and validate backend changes before submitting pull requests, shortening the maintainer review cycle.
- Contributed Django backend changes improving webhook permission handling and updated API documentation for integration endpoints; submitted a Google Summer of Code proposal.

CERTIFICATIONS & ACHIEVEMENTS

- Certified Full Stack JavaScript Developer — [IBM], [2026].
- Participated in 4 hackathons, delivering working full-stack prototypes within 24–48 hour build windows; designed and deployed 5+ production-grade AI, automation, and full-stack applications independently.
